

Wastophobia - A Good New Change

बेकारिता से डरना- बेकार होने से अच्छा है।

In this world full of plastic bags we humans somehow failed to manage them, we took birth, we died nobody cares how often a single person on this earth is passing by, what we really observe is that nothing is temporary but dear "Humans" slash "Robots" have you ever imagined about how it feels when you drowned in a sea, got stuck in a messy wire that is ripping off your skin, giving you wounds, have you ever imagined about how it feels to stay alive in a do or die condition, no?

सुना था इस धरती पर जीने का अधिकार सबका है, और दर्द सबको महसूस हो सकता है , लेकिन सच कहूँ तो ये

सब सिर्फ एक खयाल लगता है क्योंकि हम इंसानो ने आज तक इंसनायित के नाते किसी इंसान की तो दूर किसी जीव की जान तक के बारे में नहीं सोचा, विश्वास करना बेहद मुश्किल है क्योंकि हम जाने अनजाने रोज़ नजाने कितने मासूमो की जान ले लेते हैं, सोचने वाली बात है, कैसे ?

हर दिन के हिसाब से billions में प्लास्टिक का इस्तेमाल करके उसे यँही फेक देते हैं, आखिर ये प्लास्टिक जाता कहा होगा? सोचा है कभी? ये प्लास्टिक जलाने से भी खत्म नहीं होता और न ही कही फेकने से खत्म होता है, प्लास्टिक कुछ ही वर्षों में एक आम इंसान की तरह उसकी जिंदगी का ऐसा हिस्सा बन जायेगा जिससे हम कभी आज़ादी नहीं पा सकेंगे, लेकिन खुदकी गलतियों की सज़ा बेचारे जीवो को देना कोनसा महान काम है?

The plastic you throw outside your homes, wandering around, throwing cans or other plastic waste that never degrades accumulates on land, in the sea, and even cause major respiratory problems when burnt in the air, humans are not hurting themselves but forcing animals, birds and other creatures to die.

"Biodiversity is in the danger by Plastic Pollution"

Your one wrong step is responsible for poor management of the life of animals present not only on land but in the sea and even in flying in the air.

What You can do??

- ✚ You could have used one paper or cloth bag for shopping.
- ✚ You could have to use the recycling option to throw plastic bottles rather than throwing them on the roads.
- ✚ You could have collected the wires, you could have collected the waste you see you could dump easily,

But no! Who wants to take initiatives to resolve a problem, for us plastic is just a common thing which is true until unless we looked into the reality of poor management of plastic around us, but you know what, some humans are so selfless that they try every possible trick to help others surviving.

Gitika a rural lifestyle girl was very fond of the feeling of losing someone very close to her, she was in pain of losing her Chirini life, chirini was her pet bird whom she found wounded, the injury was caused by the sharp plastic wire and after some days of constant infection she couldn't be survived and died, Gitika was very well known of hazards of plastic , she has to do something to protect the living system from this hazard so she started collecting all types of plastics she could keep with herself, Gitika loves making creative things, she started deforming non recycled plastic and molding it into Pen holders, frames, she started decorating plastic bottles and used them as plant pots, she started spreading awareness to the people about good use of plastic in their households , teaching females to not to shame in collecting plastic and use them in their decoratives, since plastic is a non-degradable material hence it can be used in making almirahs, used in crafting shoe racks , small tables ,even chairs also , this can help to utilise billions of unused plastic in a good manner and even can support a normal life style.

"Nothing is impossible in this world once you are keen on making a change"

You can be one of the Gitika in this world,

Still, need inspiration?

Meet Binish Desai , known as "Recycle Man of India"

27-year-old Binish Desai, known as the recycle man of India, is recycling bio-medical waste especially single-use masks, head cover, and non-woven PPE kit into bricks.

Rajagopalan Vasudevan "The Plastic Man of India"

He is an Indian scientist who has worked mainly in waste management. He is currently a professor at Thiagarajar College of Engineering. He developed an innovative method to reuse plastic waste to construct better, more durable, and very cost-effective roads.

To know more about him

<https://g.co/kgs/NueGRA>

Rajagopalan Vasudevan Plastic Road-maker of India	"his method has been used to lay 5,000 kms of roads across 11 states using recycled plastic"
<ul style="list-style-type: none">• Madurai Professor who developed and patented an innovative method to reuse plastic waste to construct roads• Roads made using this method are more durable, water resistant and can withstand more load• Govt made it mandatory for all road developers in the country to use waste plastic for construction within 50 km of cities with more than 5 lakh people (2015)• Gave the technology to Indian Government for free, refusing to sell the same to other foreign governments	
Science & Engineering (Innovation) Male 65 Yrs Tamil Nadu	

All above are some of the famous examples.....

अगर ये सब कर सकते हैं तो हम क्यों नहीं?,
थोड़ी ताज़ी हवा, दिल में प्यार, होठों पर हसी, और एक जुनून,
काफी है खुदको साबित और बिना किसी Costume के Superhero बनने के लिए,
माना हम वैज्ञानिक नहीं लेकिन कलाकार तो बड़े हैं,
मुसीबते चाहे जैसी भी हो,
आखिर हम आज तक किसी भी मुसीबत से डरे हैं?,
एक कदम तुम्हारा,
एक कदम किसी और का होगा,
सफलता पाने के लिए इरादा ये भी पक्का होगा |

**It is not possible to break the chemical bonds of plastic ,
But yes we can break this taboo of "it is okay to live with plastic" , let's say no to plastic
and other waste.**

**“And be the hero to save the world and make survival easy,
Make this world easy to breathe and safe to live.”**
